CW (Cambridge Wireless Ltd.)

CW (Cambridge Wireless Ltd.) brings together nearly 400 hi-tech companies across the globe that develop products and applications based on a myriad of technologies including wireless, mobile, networks, semiconductor, internet and advanced software. CW connects these companies and stimulates collaborative innovation through a range of thought-provoking high-profile networking events.

Our Special Interest Groups (SIGs) provide members with a forum where they can learn about the latest technological and market developments, debate the hot topics affecting our industry and other related sectors, promote their organisations, network with renowned experts as well as recruit highly skilled individuals.

As well as a wide range of SIG events, CW also organises several larger events including the annual 'Future of Wireless International Conference', the 'Discovering Start-Ups' competition and 'Networking Dinners' for Founder Members.

Our Mission

To establish CW as the world's leading technology community through promoting innovation in the development and application of wireless, mobile, software, Internet and related technologies. We will do this by bringing together a diverse set of hi-tech companies from across the world through high quality networking events and by actively supporting the CW SIG Champion community in tracking emerging technology and market trends.
